

ABSTRACT:

Please replace the current Abstract and enter the following new Abstract:

A hub cap assembly comprises a hub cap unit mounted rotatably on a fixing unit by a stub axle, which engages a bearing unit, in the fixing unit. A weight is attached off centre on the hub cap unit, so the hub cap unit does not rotate with the vehicle wheel. The fixing unit includes a mount having one or more cranked prongs with holes at their ends. The fixing unit is attached to the vehicle wheel by unscrewing the wheel nuts, placing the fixing unit over the wheel bolts, and replacing the wheel nuts. The hub cap unit comprises inner and outer shells with a design between them, the outer shell being transparent.
